# Vinay Dinkar Kale

Email: vinaykale64@gmail.com Portfolio: vinaykale64.github.io Mobile: +1-646-510-10424Github: github.com/vinaykale64

#### EDUCATION

### Columbia University, New York

NYC, New York

M.S. Data Science

2017 - 2018

Relevant Coursework: Probability Theory, Statistics, Machine Learning, NLP, Deep Learning, Algorithms, Data Storytelling Teaching Assistant For: Applied Machine Learning, Applied Deep Learning

## Indian Institute of Technology Madras (IIT Madras)

Chennai, India 2011 - 2016

B. Tech Mechanical Engineering, M. Tech Product Design

SKILLS

Python, R, SQL, Spark, Hive, Scala, Julia, C, C++, MATLAB, LaTeX • Languages

• Frameworks Scikit, Dask, Plotly, Dash, TensorFlow, Keras, PyTorch, RShiny, Django, Flask, Tableau, MS Office

Tools Docker, GIT, Airflow, PostgreSQL, MySQL, Snowflake, Jenkins, Travis, Cookiecutter, JIRA

• Platforms Linux, AWS, GCP, Microsoft Azure, Heroku

#### EXPERIENCE

## Capital One, New York

Senior Data Scientist 2019 - Present

• Worked on building cloud-based end-to-end credit card underwriting ML model deployed via a dockerized Python API, affecting more than 100M Customers, with estimated incremental value of \$35M per year

- Advised on design refactor of internal python libraries with focus on design (reusability, architecture, code quality)
- Led development of modernized model monitoring and validation framework, decreasing the time and effort required to complete compliance-required monitoring from a week to 8 hours
- o Coached peer data scientists on effective developer habits with focus on code quality, consistent user documentation, unit testing and git workflows

## Spotify, New York

Data Science Intern Summer 2018

- Worked closely with cross-functional teams of analysts, user researchers, product owners and engineers to develop a fan-artist pair segmentation pipeline which quantified the affinity for 20 billion fan-artist pairs
- o With that, analyzed how a new video overlay feature affects a typical fan-artist journey and how different fan segments engage with it, by statistical analysis on data from AB tests
- o Other Projects: Optimised data pipelines through Google Bigquery, Redesigned artist tiering dashboard

## ZS Associates, India

Data Scientist 2016 - 2017

- o Built a intelligent Medical API using patient-data vector embeddings (similar to Word2Vec) trained on sequential big medical data. This served as input to several patient-level classification models
- o Calculated network influence in social media space (Twitter) for particular industry using graphical algorithms like Pagerank, following in-depth social media content analysis
- o Created a marketing-mix based spend analyzer data pipeline which calculates impacts of different marketing campaigns

#### Research

• CVPR Conference 2018: Traffic Surveillance Research Paper Used Mask-RCNN for object detection and localization, vehicle tracking and vehicle re-identification for highway traffic scenarios. Secured 5th Place in Nvidia AI City Challenge 2018.

## Projects

## Euphony

Python Package on PyPI

• The package alerts you when you finish running time-consuming code. It plays classical music while the code runs and stops when the code is done. Current version lets user choose artist optionally and future development includes ingesting an external url to any audio (.way, .mp3) file.

## Market-Monitor

Live Web-app to monitor financial markets

• The app lets user study stock and options prices on a chart across different time periods. It compiles latest news on the company for the user to stay up to date. The data is sourced through the yahoo finance and finviz APIs in backend, Dash library for front-end and Heroku platform for app deployment. Future development includes native options price calculator.

#### Volunteer Experience

## PyData Conference 2019, New York

As part of organizing committee, reviewed proposals and led the effort for Diversity Scholarship.
